

This connection is designed for DB25 connector commonly found on old PC. The connector has db25 on one end and an IDC connector on the other end. The cable must have 25 conductors in it, and not the one that is use for serial connection, but looks something similar.

This schematic is originally designed by Phil www.pminmc.com I just changed the connectors so it fits my needs Test points are also removed, I get confused with them :)

NOTE: If decided to make your own cable follow this pinout

DB25 Connector	IDC Connector
1	1
2	3
3	5
4	7
5	9
6	11

and so on...
